

Jim Kinsey

Regulatory Affairs Interface

Jim Kinsey serves as the regulatory affairs interface for the Gateway for Accelerated Innovation in Nuclear initiative (GAIN). At INL, he is responsible for regulatory licensing strategy development and implementation. In his role with GAIN, he works closely with industry stakeholders and the U.S. Nuclear Regulatory Commission to identify and align available regulatory resources with industry needs in support of the near-term commercial deployment of advanced nuclear technologies.

Jim has over 40 years of experience in the nuclear industry, including extensive commercial experience in licensing, regulatory affairs, system engineering, and major project management. He has managed numerous industry licensing and regulatory affairs projects, including the licensing of GE-Hitachi's Economic Simplified Boiling Water Reactor advanced design. He also has considerable experience in "day-to-day" commercial nuclear facility operation, including system engineering management of safety system performance, plant power uprate projects, and outage management. He also serves as a primary utility interface with both federal and state regulators.

Jim lives in South Carolina.
