

***Katelyn Morales***  
***Nuclear Communications***  
***Research Specialist***

Katelyn Morales is a Nuclear Communications Research Specialist with the Gateway for Accelerated Innovation in Nuclear (GAIN), led by Idaho National Laboratory (INL). She also serves as a communications liaison with the U.S. Department of Energy - Office of Nuclear Energy and is the communications lead for the [Eco:Logic](#) initiative.

In her role at GAIN, she assists with strategic communications, project management, and stakeholder engagement. She aims to bridge the gap between the environmental arena and nuclear industry.

She participated in consecutive summer internships in 2016, 2017, and 2018 while studying Environmental Communications and Environmental Science at the University of New Mexico. Through internships and personal research, she became an advocate and strong proponent of nuclear energy. It was at INL that she discovered a passion for communicating nuclear science and technology.

In her free time, Katelyn is on a quest for the perfect cup of coffee, seeks adventure in the great outdoors, and enjoys playing board games with friends.
