Gateway for Accelerated Innovation in Nuclear

Nuclear energy is a proven baseload, zero-emission power source. One of the Department of Energy's missions is to advance nuclear power as a resource capable of meeting the nation's energy, environmental and national security needs by resolving technical, cost, proliferation resistance, and security barriers through research, development and demonstration (RD&D).

Accomplishing this mission will realize the enormous potential of nuclear energy and maintain the United States' historic leadership in the field. While many innovative ideas exist, the RD&D needed to bring these concepts to a commercial readiness level is traditionally lengthy and expensive.

Why is GAIN needed?

The facilities needed to conduct the necessary RD&D activities are very expensive to develop and maintain. Facilities at government sites have not been easily accessible by the entities trying to commercialize creative systems and components.

Additionally, the regulatory framework for novel ideas needs to be streamlined, with a clear, defined set of requirements for licensing concepts. Reducing the uncertainties and financial risks of achieving technical readiness and licensing will help spur further investment in innovative nuclear energy technologies.

Challenges

When it comes to deploying new technologies, there are two primary challenges facing innovators:

- ▶ Retirement of technical and licensing risk
- ▶ Reduce risk and cost of commercial deployment

By addressing the multiple steps of the development process, GAIN enables efficient and cost-effective resolution of these challenges:

- ▶ Incubation of innovative ideas using existing infrastructure and government-sponsored research programs.

- ▶ Faster and less-expensive maturation of the technologies toward engineering-scale demonstration using R&D test bed capabilities.
- ▶ Reduction of commercialization uncertainty by using demonstration platforms to prove technical feasibility and economic viability.

“
Through the GAIN Initiative and PNNL support, CBCG was successful in developing a licensing perspective and developmental steps in formulating critical design criteria, which normally would have been unachievable for a non-traditional developer.”

- William J. Stokes,
President - Columbia Basin
Consulting Group (CBCG)

What is GAIN?

Through GAIN, DOE is making its state-of-the-art and continuously improving RD&D infrastructure available to stakeholders to achieve faster and cost-effective development of innovative nuclear energy technologies toward commercial readiness.

The capabilities accessible through GAIN include:

- ▶ Experimental capabilities with primary emphasis on nuclear and radiological facilities, but also including other testing capabilities (e.g. thermal-hydraulic loops, control systems testing, etc.).

- ▶ Computational capabilities along with state-of-the-art modeling and simulation tools.
- ▶ Legacy data and information to support advanced nuclear technologies.
- ▶ Land use and site information for demonstration facilities.

GAIN Vision

By 2030, the U.S. nuclear industry is equipped to lead the world in deployment of innovative nuclear technologies to supply urgently needed abundant clean energy both domestically and globally.

Accessing GAIN

Through GAIN, users can access world-class nuclear research resources and capabilities available at DOE national laboratories (e.g. Argonne National Laboratory, Idaho National Laboratory, and Oak Ridge National Laboratory).

Please visit our website for further information: gain.inl.gov.

Recognizing the reality that we must innovate differently today, GAIN fosters partnerships between labs, industry, universities and regulators to accelerate the transformation of advanced nuclear technologies into our clean energy future.

- Dr. Rita Baranwal, GAIN Director
