

This July, international nuclear safeguards are about to get real.

Nuclear Facilities and Safeguards Experience (NFASE) July 8-11, 2025 • Toronto, Canada

NFASE is hosted by the Department of Energy's National Nuclear Security Administration (DOE/NNSA) with support from the Canadian Nuclear Safety Commission (CNSC). The 4-day experience is designed to help A/SMR developers meet the highest standards of nonproliferation required to compete in the global nuclear market.

This is a rare opportunity to:

- Take insider tours of three of Canada's nuclear facilities at McMaster University, Cameco and Ontario Power Generation.
- Engage directly with advanced nuclear industry experts to better understand — and embrace — effective and efficient international nuclear safeguards.
- Experience how safeguards are implemented by national authorities and the International Atomic Energy Agency (IAEA).

Register by June 15th using the QR code here. Questions? Email NFASE@anl.gov. Please note that DOE/NNSA will cover all course fees and local transportation between facilities; participants are responsible for their own travel and lodging.

To register, scan the QR code or [click here](#).
